

# CONLINE RHENANIA

# Onshore and offshore coating specialists

As Europe's largest independent pipe coater Conline-Rhenania provides delivery assurance with her 14 production lines in the Netherlands. The production lines cover a pipe range from 1/2" up to 64" with lengths of 6 to 26 meters.

Conline-Rhenania has recently opened a brand new production unit and storage yard at the port of Moerdijk. This location also houses our main office.

Conline-Rhenania is divided into three divisions: Waterworks, Oil and Gas Onshore and the Offshore division. We work from four Dutch locations, all of which are very well connected to Europe's most important steel mills by rail and by road. Furthermore, our production units are located near our own deep water quaysides, allowing the transport of pipelines by sea vessels. The Netherlands are known to have one of the most extensive and advanced seaport infrastructures in the world. Conline-Rhenania's clients benefit from these transport possibilities.

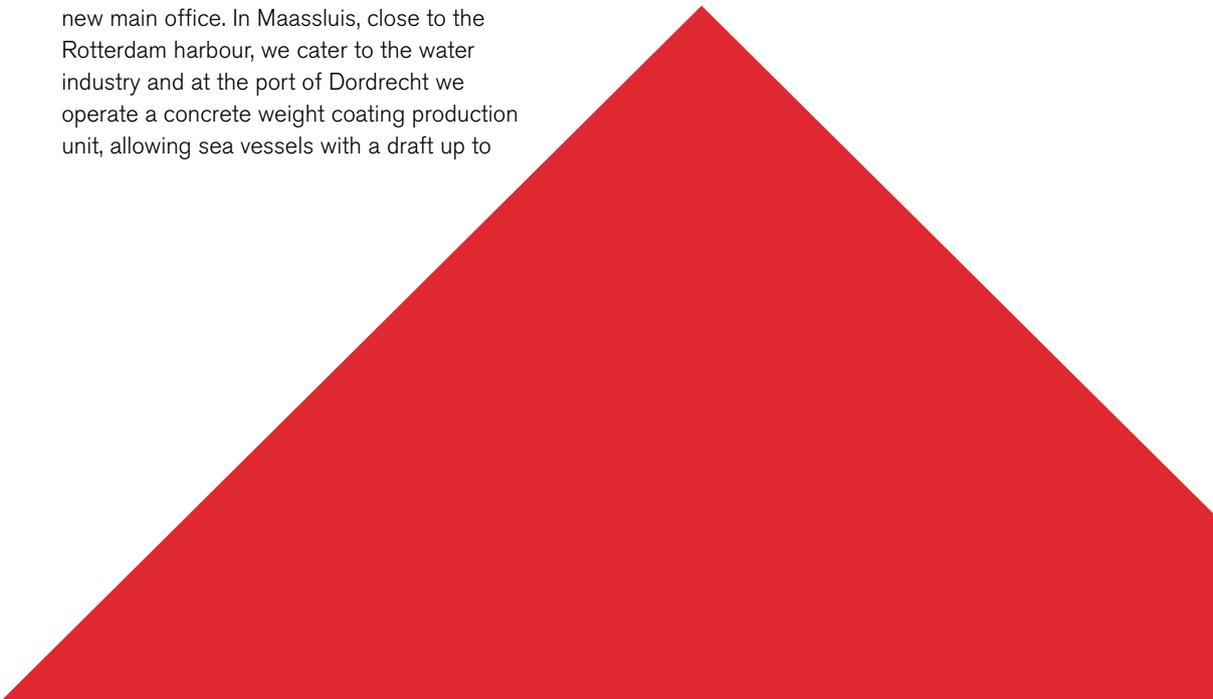

**MOERDIJK: BRAND NEW FACILITY**

At the port of Moerdijk we recently built a brand new all-round production unit that's especially equipped as a one-stop-shop for the offshore industry. Moerdijk is also the location for a large storage yard and our new main office. In Maassluis, close to the Rotterdam harbour, we cater to the water industry and at the port of Dordrecht we operate a concrete weight coating production unit, allowing sea vessels with a draft up to

9.4 meters. Coating projects for the oil and gas industry, both onshore and offshore, are carried out at all of our locations, including Nijmegen close to the German border.

**PART OF THE FAMILY**

Conline-Rhenania is part of A.Hak, a group of companies that designs, constructs and maintains the infrastructure required to provide homes and companies with energy, water and communication. A.Hak is a family owned enterprise with short communication lines that enable subsidiary companies to be more flexible and resilient in challenging markets. Being part of the family, Conline-Rhenania was able to build the new Moerdijk plant, a modern production unit with state of the art equipment and an advanced test laboratory. The plant was built in close cooperation

with several A.Hak companies, keeping the knowledge in-house which guarantees an easy automatic upgrading of the plant when required in the future.

#### **QUALIFIED PARTNER**

Corporate Social Responsibility (CSR) and sustainability are very important aspects of our business model. Proper care for quality, health, safety and environment are integral parts of our daily work. Our QHSE departments and management contribute to the continuous improvement of the organization, with General Risk Assessment, Environmental Risk Assessment, Machinery Risk Assessment and Production Risk Assessment as parts of their QHSE philosophy. Our efforts resulted in various certification marks like ISO 9001, ISO 14001, OHSAS 18001 and the KIWA production certificates. Our coating systems and production lines are continuously monitored by means of client line qualifications, project qualifications next to the our QA/QC department line qualifications.

#### **SAFETY**

Safety is our number one priority. We insist on an incident and injury free environment for our clients, employees, contractors and neighbours. The principles we adhere to are reflected by our management system. We strive to create and maintain a safe operating culture at our production units by improving the leadership skills of staff, simplifying our requirements and rewarding successful safety performance. Furthermore, safe pipeline handling is mandatory for all our production

units. Conveyor systems, pipe indexers, overhead and portal cranes eliminate the necessity of people moving between pipes.

#### **INNOVATION**

Our advanced automated data logging systems, with continuous registration of all production and laboratory data, provide product security and high quality performance. It also helps us achieve our CSR objectives by making our production lines more efficient in terms of the use of energy and materials. Our advanced pipe tracking system, fed immediately at the product line, gives us, our clients and client inspectors instant access to production data. It also contributes to an open information structure, while our modern test equipment ensures an optimum product quality.

**Our production units are equipped with 14 production lines that provide coating products like:**

- **3 layer polyolefin anticorrosion systems on carbon steel pipes**
- **3 layer polyolefin anticorrosion systems on stainless steel pipes**
- **Fusion Bonded Epoxy (FBE)**
- **Epoxy systems for internal and external coating**
- **Polypropylene reinforced cement for mechanical protection**
- **Concrete weight coating (CWC)**
- **Internal cement lining**
- **Wet thermal insulation coating**
